

LIST OF ORDERS

Power Query Data Preparation — Observation Report

Objective

To document the steps shown in the supplied List of Orders Power Query screenshots, including source loading, row handling, text standardization, location creation, and data-quality checks.

Dataset and fields

The screenshots show the List of Orders source with fields including Order ID, Order Date, CustomerName, City, and State. City and State are combined into a new Location field. This report records only actions and observations supported by the supplied PDF.

Step-by-step observations

Step	Action	Observation
1	Open the Order Details source	The Order Details source is opened in Power Query to inspect the raw table before transformation.
2	Load Order Details into Power Query	The imported Order Details data is available for transformation and modelling.
3	Review the Order Details query	The Order Details query is visible with its columns and data types.
4	Open the Sales Target source	The Sales Target source is selected and its preview is displayed.
5	Browse for the source file	The file-selection window is used to locate the required source file.
6	Open the List of Orders source	The List of Orders source is selected and its preview is shown.
7	Load List of Orders	The List of Orders query is loaded into Power Query for cleaning.
8	Keep the required number of rows	The Keep Top Rows option is used to retain the required records.
9	Keep 500 rows	The query is shown with the required 500 rows.
11	Select CustomerName for formatting	CustomerName is selected for text standardization.
12	Capitalize CustomerName	Customer names are standardized using capitalization.
13	Open Merge Columns	The Merge Columns dialog is opened to combine City and State.
14	Configure the Location column	The merged column is configured with a comma separator and the name Location.
15	Create Location	City and State are successfully combined into Location.
16	Check Location values	Location values are reviewed for consistency.
17	Check Order Date values	Order Date values are checked for missing or unusual records.
18	Check CustomerName values	CustomerName values are reviewed for consistency.
19	Open row-removal options	Remove Rows options are opened for duplicate, blank-row, and error cleanup.
20	Remove duplicate Order IDs	The screenshot documents removing duplicate Order IDs while retaining the cleaned result.
21	Check Order Date again	Order Date is checked again for empty or invalid values.
22	Review filtered date records	The date filter view is used to validate the available Order Date values.
23	Review row-removal options	The row-removal controls are reviewed as part of data-quality validation.

Step	Action	Observation
24	Continue data-quality validation	The query is reviewed after the row-cleaning operations.
25	Verify the cleaned table	The List of Orders table remains populated and ready for final cleanup.
26	Review the final query before error cleanup	The query and applied transformations are reviewed before final text cleanup.
27	Confirm Order Date data type	Order Date is shown with the Date data type.
28	Select CustomerName	CustomerName is selected for the final text-cleaning operation.
29	Select Location	Location is selected for text cleanup.
30	Open Format > Trim for Location	The Format menu is opened with Trim available for Location.
31	Trim Location	Unnecessary leading or trailing spaces are removed from Location.
32	Open Format > Trim for CustomerName	The Format menu is opened with Trim available for CustomerName.
33	Trim CustomerName	CustomerName is trimmed successfully.

Summary

- The List of Orders source was loaded into Power Query and Keep Top Rows was used to retain 500 rows.
- CustomerName was standardized with capitalization and trimmed to remove unnecessary leading or trailing spaces.
- City and State were merged into a Location column using a comma separator.
- Order Date, CustomerName, and Location values were reviewed as part of the data-quality checks.
- The screenshots document a duplicate-removal step for Order IDs; the PDF does not state the resulting row count after that step.

Note: The supplied source jumps from Step 9 to Step 11. Step 10 was not present in the PDF, so it has not been invented in this report. This report summarizes the written observations and visible workflow from the uploaded 32-page PDF and does not claim additional validation results that are not shown.
